Re: Revision of *Part 15 of the Commission's Rules*  
ET Docket No. 13-49

Dear Chairman Wheeler,

I am the Chief Financial Officer of GeoSonics Inc. and Vibra-Tech Engineers, Inc., sister companies, with over 120 employees and 20 offices across the United States. I am writing this correspondence in support of Globalstar in the above proceeding.

GeoSonics designs and manufactures communications solutions for our seismic equipment. Together with our sister company, Vibra-Tech, we provide monthly communications solutions for the aggregate industry that allows seismic data to be transmitted in real time from mines and quarries throughout the country. We have used Globalstar's satellite system since the early 2000's to send and receive data transmissions remotely to and from locations where there is no wireless terrestrial coverage. These locations include West Virginia, Florida, Georgia, Pennsylvania, Texas, South Carolina, Missouri and Kentucky.

We have hundreds of customers across the United State that use our remote monitoring services. These customers include Martin Marietta, Vulcan Material, Hanson Quarries and CEMEX to name a few.

In order for us to provide a meaningful service to these customers, we must have the ability to send and receive data in a timely fashion. We have found that Globalstar's system, especially with the recent addition of satellites to its network, provides a communications platform for our data services that is both extremely reliable and fast.

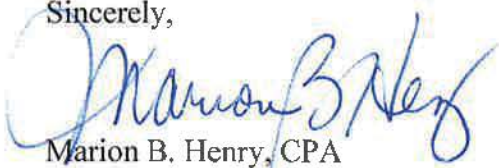

Our customers utilize this data in to ensure that they are operating within the various guidelines established by state and local governments. We are able to provide them essentially "real time" results of their activities which alerts them to any issues they may be incurring as a result of their blasting activities.

Globalstar has recently completed the launch of additional satellites to improve its service quality and we look forward to working with them in the future and growing our business. I understand that you are currently considering allowing cable companies to use Globalstar's spectrum for their own commercial interests. Please do not allow any other uses of Globalstar's spectrum that would impact their continued ability to provide satellite-based communications services. Our business depends upon Globalstar.

Sincerely,

Marion B. Henry, CPA  
Chief Financial Officer
